

```
<?php
$str = "Hello World";

echo "<h2>String Manipulation</h2>";

echo "Original String: " . $str . "<br>";

echo "Length of String: " . strlen($str) . "<br>";

echo "Reverse String: " . strrev($str) . "<br>";

echo "Substring: " . substr($str, 0, 5) . "<br>";
?>
```

Code explanation

String variable

```
$str = "Hello World";
```

Stores the string in a variable.

Length

```
strlen($str)
```

Returns the number of characters.

Reverse

```
strrev($str)
```

Reverses the string.

Substring

```
substr($str, 0, 5)
```

Takes part of the string.

- 0 = starting position
- 5 = number of characters

Short viva explanation

If teacher says “Explain your program,” you can say:

“This PHP program performs string manipulation. It displays the original string, finds its length, reverses it, and extracts a substring.”

Common viva questions

1. What is a string?

A string is a sequence of characters.

2. Which function finds string length?

```
strlen()
```

3. Which function reverses a string?

`strrev()`

4. Which function extracts part of a string?

`substr()`

5. What does `substr($str, 0, 5)` mean?

It takes 5 characters starting from position 0.

Very likely practical viva question

How many characters are in "Hello World"?

Answer:

11 characters (including the space).
